HOW WILL YOUR ANIMAL SURVIVE?

Animals (including humans!) have adaptive traits that help them survive in their environments. Create an IMAGINARY animal with REAL adaptive traits to help your animal survive.

Pick your environment

The environment my animal lives in is (circle one):

Hot and Wet (like a rainforest) **Cold and Snowy** (like the tundra)

Hot and Dry (like a desert)

What does you animal eat?

My animal eats: (circle one or two):

Meat (larger animals)	Insects, Bugs, & Tiny Animals	Plants
(e.g. antelopes, fish, mice)	(e.g. ants, worms, flies, mites)	(e.g. leaves, roots, seaweed)

How does your animal avoid getting eaten?

Circle three or more defenses:

Big & Strong

large, strong animals like elephants are less appealing to predators

Hides

staying out of sight is a tried and true way to avoid predators

"Spikes"

items like porcupines quills or hedgehog spines can deter or injure predators

Bright Colors

bright colors can be a signal to predators that the animal is poisonous

Poison

some animals have poisonous skin, or they spray chemicals when attacked

Other _____

There are tons of defenses against predators - write yours here!

Camouflage

camouflage helps animals blend into the background or look like something else to avoid being found by predators

Shell

a hard shell can protect against sharp teeth or claws

Other _____

There are tons of defenses against predators - write yours here!

ELEMENTARY SCIENCE MADE EASY™ How Will Your Animal Survive?

Sketch out your imaginary animal

Write down details about how your imaginary animal survives. Use bullet points (complete sentences are <u>not</u> necessary). Be specific!

What foods does you animal eat?	How does your animal stay warm or cool?
•	•
•	•
How does your animal get its food?	What predators does your animal have?
•	•
•	•
Does your animal live alone, in groups, or mixed?	
•	
What are your animal's defenses?	
•	
•	
•	

What real animals and adaptive traits were you inspired by?
