

Meet a Neuroscientist: Dr. Pawan Sinha

Meet Dr. Pawan Sinha. He is a **neuroscientist**.

Neuroscientists study the brain. Pawan studies how the eyes and brain work together to let us see images. Did you know that your eyes connect to your brain?

Pawan is curious to understand how your brain can identify and recognize things that you see!

Pawan uses his skills and knowledge to help others. Medical care can cure some types of blindness. Pawan started **Project Prakash** to give medical care to children in India who have curable blindness.

What was Pawan's childhood like?

Pawan grew up in India. His parents both worked in education. Pawan greatly admired his older sister. He was proud of her for being an excellent student and becoming a doctor.

In this picture Pawan is working with children in India who have recently gained eyesight.

His sister worked to help people and taught him about service.

His sister died when she was 25. Pawan works to do good for the world like his sister did. She inspires him to this day.

Pawan hopes you love to help others too.
